Pain Management In Subarachnoid Hemorrhage

Subarachnoid hemorrhage (SAH) is bleeding into the subarachnoid space—the area between the arachnoid membrane and the pia mater surrounding the brain. Symptoms may include a severe headache of rapid onset, vomiting, decreased level of consciousness, fever, and sometimes seizures. Neck stiffness or neck pain are also relatively common. In about a quarter of people a small bleed with resolving ...

Subarachnoid Hemorrhage | NEJM

Headache is the most common complaint of patients who present with aneurysmal subarachnoid hemorrhage (SAH). It is thought that the headache is primarily due to the chemical irritation of the blood on the brain meninges, though many other factors are associated. The hypertension that tends to be present after SAH may also contribute to the development of headache, as may the evolution of ...
