Digestion is the breakdown of large insoluble food molecules into small water-soluble food molecules so that they can be absorbed into the watery blood plasma. In certain organisms, these smaller substances are absorbed through the small intestine into the blood stream. Digestion is a form of catabolism that is often divided into two processes based on how food is broken down: mechanical and ...

Digestion - Wikipedia
The Master of Animal Science (MAS) non-thesis degree program is designed to give students a deeper academic background in sub-disciplines associated with the field of Animal Science which include nutrition, physiology, genetics, biotechnology and animal management.

Animal Science | NC State Online and Distance Education
The gastrointestinal tract (digestive tract, digestional tract, GI tract, GIT, gut, or alimentary canal) is an organ system within humans and other animals which takes in food, digests it to extract and absorb energy and nutrients, and expels the remaining waste as feces. The mouth, esophagus, stomach and intestines are part of the gastrointestinal tract.

Gastrointestinal tract - Wikipedia
Research Highlights Microbially produced PA regulates adipokine production in human adipose tissue PA links microbial fermentation in the colon to obesity and/or diabetes type 2 PA effects are exerted through GPCR41 and 43, it activates PPARγ and inhibits NF-κB PA emerges as a mediator in the link between nutrition, gut microbiota and physiology.

Mootral's scientific advisory board has decades of experience in feed technology, enteric fermentation of ruminants and animal health. Our experts in agricultural sustainability, physiology, and veterinary science from all over the world enable and facilitate research in reducing the impact of animal agriculture on the environment, particularly greenhouse gas emissions globally.

The Science behind Mootral
Plant and Soil Science, B.S. Agriculture 615-494-8996 Nathan Phillips, program coordinator Nate.Phillips@mtsu.edu . The program leading to a major in Plant and Soil Science is designed for students interested in agronomy, horticulture, and/or soil sciences.

Clostridial Spores in Animal Feeds and Milk 379 occurrence ratio is higher in stored feed. Soil diversity pattern shows less specificity in diversity, while milk clostridial diversity seem to be more related to contamination by feces
Clostridial Spores in Animal Feeds and Milk - InTech - Open
Our objective was to provide a review of factors influencing heat stress in lactating dairy cows and how it affects milk production. In warmer parts of the world, during summer months in the United States, and in other temperate regions, reduced milk production resulting from heat stress counteracts tremendous genetic progress achieved in increasing milk production.

Heat stress in lactating dairy cows: a review - ScienceDirect
Ruminant livestock are important sources of human food and global greenhouse gas emissions. Feed degradation and methane formation by ruminants rely on metabolic interactions between rumen ...

Rumen microbial community composition varies with diet and ... This page contains the notes for our book Perfect Health Diet: Regain Health and Lose Weight by Eating the Way You Were Meant to Eat (US edition, Scribner, 2012), plus errata. Click the following titles to reach the notes for each chapter: Preface; Part I: An Evolutionary Guide to Healthful Eating
